10/23/2026

• **Actions to stop doing:** These are the activities or actions the team determined they should stop doing. This is the answer to the question, "What things should we stop doing?" The items should take the form of a brief description of what the team wants to stop doing, followed by a brief explanation. If there are no items, this section should describe why the team is completely satisfied with their current process.
Examples: The team should stop holding daily scrum meetings at 7am in the morning, because nobody can make that meeting time. The team should stop allowing daily scrum meetings to go over 15 minutes, because the meetings are less effective that way.

- The team should stop overestimating how much work we can do in a sprint, because it was too ambitious

• **Actions to start doing:** These are the activities or actions the team would like to start doing to improve their development process. This is the answer to the question, "What should we start doing?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.
Examples: The team should schedule more group work sessions, since these are very effective at getting work done. The team should be more accurate at estimating work tasks, since tasks were consistently under-estimated last sprint.

- The team should use scrum poker to better estimate task work and understand the problem better
- The team should add code coverage checks
- The team should do test driven development
- The team should define the criteria for when a feature is done

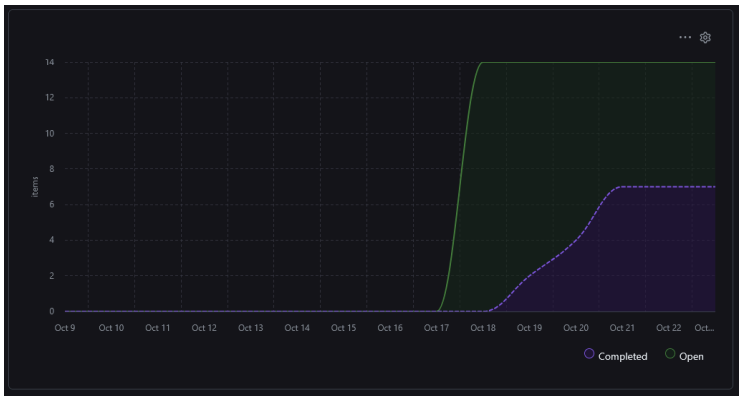

• **Actions to keep doing:** This is the answer to the question, "What is working well that we should continue to do?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.

- The team should keep creating project board for task distribution

• **Work completed/not completed:** This is a list of the user stories that were completed during the previous sprint, and a list of the user stories not completed during this sprint (but which were part of this sprint, and were in the sprint plan).

- **Work Completed:**
    - [1.1] As a UCSC student, I want to sign in and land on a simple home screen with clear navigation, so that I can start using the app without confusion.
        - We completed the sign in page. We decided that instead of a traditional home screen, we have the map act as the "home screen" and have our different functionalities hidden in a sidebar. We finished the login functionality.
- **Work Uncompleted:**
    - [1.2] As a UCSC student, I want to see a list of classes with their building and room, so that I can check where each class meets.
    - [1.4] As a UCSC student, I want my account and class data to be visible only to me, so that my information stays private unless I choose to share it.

• **Work completion rate:** This section should report the following: total number of user stories completed during the prior sprint. Total number of estimated ideal work hours completed during the prior sprint. Total number of days during the prior sprint. For the previous sprint, the user stories/day and ideal work hours/day figures should be reported. For sprints past the first sprint, this section should also provide the average user stories/day and average ideal work hours/day figures computed across all sprints to date. The final sprint burnup chart for the previous sprint should be available for viewing in the lab and an email of this chart sent to the TA/prof.
