• **Actions to stop doing:** These are the activities or actions the team determined they should stop doing. This is the answer to the question, "What things should we stop doing?" The items should take the form of a brief description of what the team wants to stop doing, followed by a brief explanation. If there are no items, this section should describe why the team is completely satisfied with their current process.
Examples: The team should stop holding daily scrum meetings at 7am in the morning, because nobody can make that meeting time. The team should stop allowing daily scrum meetings to go over 15 minutes, because the meetings are less effective that way.

- Stops making TypeScript files huge
    - Refactor to separate different components to make more readable
- Stop marking task as completed before PR is merged
- Stop making PRs before pulling important merges
- Stop waiting until the last day to work on a task
- Stop not coordinating when changing table schemas

• **Actions to start doing:** These are the activities or actions the team would like to start doing to improve their development process. This is the answer to the question, "What should we start doing?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.
Examples: The team should schedule more group work sessions, since these are very effective at getting work done. The team should be more accurate at estimating work tasks, since tasks were consistently under-estimated last sprint.

- Start coordinating more when when changing table schemas
- Start working more evenly throughout the sprint (maintain a steady line on the burnup chart that is on pace)
- Start organizing files more effectively
- Start asking Agent to have "rollback" files when changing/creating new schemas on Supabase

• **Actions to keep doing:** This is the answer to the question, "What is working well that we should continue to do?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.

- Keep updating remaining estimates at each standup

- Keep using scrum poker to better estimate task work and understand the problem better
- Keep doing test driven development
- Keep using the scrum board

- **Work completed/not completed:** This is a list of the user stories that were completed during the previous sprint, and a list of the user stories not completed during this sprint (but which were part of this sprint, and were in the sprint plan).

    - **Work Completed:**

        - 2.1: As a UCSC student, I want to see a list of classes with their building and room, so that I can check where each class meets. (2.1 completed as you can see each class and the building room. Future work is linking those up with our classroom entities)

        - 2.2: As a UCSC student, I want a way to save my class information like location, meeting days and times, etc. so I don't have to log into MyUCSC everytime to check them (2.2 completed. Did not end up doing the extension of getting schedule automatically from MyUCSC)

        - 2.3: As a UCSC student, I want my account and class data to be visible only to me, so that my information stays private unless I choose to share it.

    - **Work Uncompleted:**

        - 2.4: As a UCSC student, I want to be able to see user data such as water fountains or bathroom locations, previews of classrooms, classroom features, etc. so that I can find them and information about them.

        - 2.5: As a UCSC student, I want to be able to earn points and compete on leaderboards for my contributions, so that I can feel rewarded for contributing and receive recognition.

- **Work completion rate:** This section should report the following: total number of user stories completed during the prior sprint. Total number of estimated ideal work hours completed during the prior sprint. Total number of days during the prior sprint. For the previous sprint, the user stories/day and ideal work hours/day figures should be reported. For sprints past the first sprint, this section should also provide the average user stories/day and average ideal work hours/day figures computed across all sprints to date. The final sprint burnup chart for the previous sprint should be available for viewing in the lab and an email of this chart sent to the TA/prof. (we showed the TA during the meeting already, and are attaching as a screenshot here for later view)
